# Net Centric Programming, JDBC LAB, CSE-D

Design a database to store details received from following form. (Need not design the form)

1. Database has an additional table called **CITY** which stores name of the city corresponding to the "Shipping City Zipcode". It should be obtained with the help of an external APIs like "maps.googleapis.com/maps". A snapshot of the table is given blow.

Zipcode	City
90210	Beverly Hills
94016	Daly City
10001	New York
14201	Buffalo

2. Design an application in JAVA the retrieves the products on providing any of the aforementioned details.
